

# BODY PIERCING

## AFTERCARE INSTRUCTIONS

If you have any questions about your piercing or the healing process, please call or e-mail.

### How to Clean Your Body Piercing:

1. Wash your hands thoroughly prior to cleaning or touching on or near your piercing with antibacterial soap and hot water.
2. Prepare the area for the cleansing by rinsing or soaking with warm water. Apply a small amount of your diluted antimicrobial/germicidal medicated soap to the area with your clean hands.
3. Gently massage into your skin for a few minutes.
4. Use a Q-Tip soaked in your diluted antimicrobial soap to remove any lymph deposits (crusties). Do not rotate jewelry. Never pick with fingernails! This step is important for your comfort.
5. Pat the area dry if needed with disposable paper products such as gauze or tissues, as cloth towels can harbor bacteria.
6. During the first four weeks, clean your piercing twice per day. Following the four weeks, clean your piercing one to two times per day.

If you do not take care of your piercing, it may become infected. Infections are very red around the outside of the piercing. It may ooze, pus, or bleed abnormally. **If you think your piercing is infected, seek medical attention immediately.**

If you have any questions about your piercing or the healing process, please call or e-mail us.
